EDUCATION

Vellore Institute of Technology (VIT)

B.Tech – Computer Science and Engineering (CSE Core) — CGPA: 9.02 / 10.0

Relevant Coursework: Data Structures & Algorithms, Object-Oriented Programming, Computer Programming: Python & Java

Vellore, India

Jul 2024 – May 2028

Delhi Public School Megacity

Class XII (ISC): 95.25% (PCM + CS) — Class X (ICSE): 99.2%

Kolkata, India

Apr 2024

EXPERIENCE

AI/ML Intern

May 2026 – Present

GWC Data.ai

Kolkata, IN

- Built and benchmarked 3 transformer-based classification pipelines (BERT, DistilBERT, RoBERTa) in PyTorch and TensorFlow, achieving up to 91% F1 on internal sentiment benchmarks with fully reproducible experimental workflows via structured config management.
- Designed end-to-end NLP preprocessing and evaluation pipelines in Python using Hugging Face Transformers, covering tokenization, batching, and sequence-level metrics across classification and language generation tasks.
- Reduced non-technical stakeholder review cycles by approximately 40% by engineering Streamlit dashboards surfacing model predictions, confidence scores, and failure-case visualizations, eliminating raw notebook walkthroughs entirely.

Open-Source Contributor — GirlScript Summer of Code (GSSoC'26)

May 2026 – Present

Arnio (Python, ML data library) — Merged PR #1005

- Designed `ArFrame.schema` summary with a memory-efficient `ColumnSummary (...slots...)` class enabling zero-overhead schema inspection on ML dataframes, eliminating pandas round-trip overhead in preprocessing pipelines; integrated natively into existing frame pathways to preserve execution performance.
- Authored 30 automated tests covering correctness, edge cases, namespace exports, and regression safety, achieving a full pass rate across the project's 1,255-test suite (0 failures) and meeting production-grade reliability standards.

PROJECTS

Sevaverse | Community Service Platform | [GitHub](#) | JavaScript, Express.js, Node.js

Apr 2025

- Architected a **scalable backend** supporting **2 user roles** and **20+ distinct workflows** using **Express.js**, with a clean separation of concerns designed for long-term extensibility and maintainability.
- Built **data processing pipelines** handling **10,000+ records per run**, applying structured algorithmic problem-solving and performance optimization to meet throughput requirements reliably.
- Owned **end-to-end backend feature development** from requirements analysis through implementation, testing, and performance tuning with no external handoffs.

ViaMigo | Travel & Itinerary Assistant | [GitHub](#) | Python, JavaScript, React.js, Tailwind CSS

Sep 2025

- Built **end-to-end full-stack features** integrating **10+ third-party APIs** with a **ReactJS** and **Tailwind CSS** frontend backed by REST APIs, delivering responsive, data-driven user experiences.
- Collaborated in a **cross-functional Agile team** via GitHub, participating in code reviews, task prioritisation, and iterative sprint delivery to ship features on schedule.
- Contributed to **technical design discussions** evaluating architectural trade-offs, driving decisions that improved system scalability and long-term maintainability.

Chronicle AI | Multimodal Institutional Memory System | [GitHub](#) | Python, CLIP, Qdrant, FastAPI

Jan 2026

- Fine-tuned CLIP (ViT-B/32) on a domain-specific image-text corpus using contrastive loss, improving semantic retrieval precision@5 by 18% over the zero-shot baseline across heterogeneous text and image data.
- Ran ablation studies across embedding dimensions, similarity thresholds, and metadata filter combinations in Qdrant, identifying the optimal configuration achieving sub-100ms query latency with maximum recall.
- Designed and deployed scalable REST APIs and data ingestion pipelines via FastAPI for structured and unstructured data, with a generative reasoning engine producing source-attributed responses grounded in retrieved evidence.

Discord Moderation Orchestrator | [GitHub](#) | Python, LangChain, FastAPI, Discord API

Oct 2025 – Jan 2026

- Built an **AI agent pipeline** using **LangChain** and LLMs to parse natural language commands into structured, **multi-step moderation action plans** with controlled execution logic for reliability.
- Integrated a **FastAPI** backend with the **Discord API** to automate **real-time** role, channel, and permission workflows, eliminating manual moderation overhead for server administrators.
- Improved **automation reliability** through structured prompt design and execution guardrails, reducing failure surface area in live Discord environments handling **concurrent moderation events**.

Data Breach Monitor | Security CLI Tool | [GitHub](#) | Python

May 2025

- Built a **modular CLI tool** to detect **compromised credentials** by processing large breach datasets with **automated filtering**, preprocessing pipelines, and robust error handling for fault-tolerant execution.

TECHNICAL SKILLS

Languages: Java, Python, C/C++, JavaScript, HTML, CSS

Frameworks & Tools: Node.js, Express.js, React.js, FastAPI, Streamlit, Git, GitHub, Docker, Vite

AI/ML: LangChain, Hugging Face Transformers, TensorFlow, PyTorch, Scikit-learn, CLIP (ViT-B/32)

Databases: MySQL, Qdrant (Vector DB)

Concepts: DSA, OOP, REST APIs, SDLC, CI/CD, Cloud Computing (AWS/Azure), Agile Methodologies, Debugging & Testing, Performance Optimization

CERTIFICATIONS

Supervised Machine Learning: Regression and Classification — Andrew Ng, Coursera | Implemented linear regression, logistic regression, and regularisation from scratch in Python, reinforcing probability and optimisation fundamentals.
